Provider address: ____________________________________________________________________________

Provider contact: ____________________________________________________________________________

have examined ______________________________ on _______________________

Name of student: ______________________________

Date of Exam: _______________________

For admission to the CSI Dental Hygiene Program ____________________________________________________________________________ and report the following immunization information:

The below recommendations follow the CDC recommendations for vaccinations for healthcare workers. Healthcare workers include physicians, nurses, emergency medical personnel, dental professionals and students, medical and nursing students, laboratory technicians, pharmacists, hospital volunteers, and administrative staff. (www.cdc.gov)

**Hepatitis B**

REQUIRED If you don’t have documented evidence of a complete hepB vaccine series, or if you don’t have an up-to-date blood test that shows you are immune to hepatitis B (i.e., no serologic evidence of immunity or prior vaccination) then you should: Get the 3-dose series (dose #1 now, #2 in 1 month, #3 approximately 5 months after #2). Get anti-HBs serologic tested 1–2 months after dose #3.

**Tetanus and Diphtheria & Pertussis**

REQUIRED Get a one-time dose of Tdap as soon as possible if you have not received Tdap previously (regardless of when previous dose of Td was received). Get Td boosters every 10 years thereafter. Pregnant HCWs need to get a dose of Tdap during each pregnancy.

**Measles, Mumps, Rubella**

REQUIRED If you were born in 1957 or later and have not had the MMR vaccine, or if you don't have an up-to-date blood test that shows you are immune to measles or mumps (i.e., no serologic evidence of immunity or prior vaccination), get 2 doses of MMR (1 dose now and the 2nd dose at least 28 days later). If you were born in 1957 or later and have not had the MMR vaccine, or if you don’t have an up-to-date blood test that shows you are immune to rubella, only 1 dose of MMR is recommended. However, you may end up receiving 2 doses, because the rubella component is in the combination vaccine with measles and mumps.

**Varicella**

REQUIRED If you have not had chickenpox (varicella), if you haven’t had varicella vaccine, or if you don’t have an up-to-date blood test that shows you are immune to varicella (i.e., no serologic evidence of immunity or prior vaccination) get 2 doses of varicella vaccine, 4 weeks apart.

**Meningococcal**

REQUIRED Those who are routinely exposed to isolates of *N. meningitidis* should get one dose.

**Influenza (Flu)**

REQUIRED Get 1 dose of influenza vaccine annually during flu season.
Please complete immunization record on following pages.

**REQUIRED** PPD Tuberculin Skin Test *(current test must last until program completion)*

**2-Step (PPD/Mantoux) TB Skin Test and Chest X-ray Instructions**

**How do I get the 2-step TB skin test?**

1. Get the TB skin test administered with date and signature documentation.
2. 48-72 hours after TB skin test is administered you go back to the results (should be recorded in mm indicating negative or positive).
3. If this was the first TB skin test you have ever had in performed in your lifetime you will need to have an additional TB skin test administered no sooner than 1 week from the 1<sup>st</sup> test and no later than 2 weeks after the first test.
4. 48-72 hours after TB skin test is administered you go back to the results (should be recorded in mm indicating negative or positive).
**HEALTH IMMUNIZATION RECORD**

**What if I get a positive TB test result?**
- If you receive a positive TB skin test, you will need a Chest X-ray to determine whether or not you have active TB.
- If you have previously tested positive for TB and have a Chest X-ray that is completed within the last 4 years, you may turn in that documentation.

*Note: Once you test positive for TB you will always test positive. Therefore, from that point on you will need to get a Chest X-ray every 4 years.*

**2-Step TB Skin Test and Chest X-ray Documentation**

Complete the following section, type or print clearly.

<table>
<thead>
<tr>
<th>First Name (in box below)</th>
<th>Middle Initial</th>
<th>DOB</th>
<th>Last Name</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>

**Prior positive TB skin test**
- Date:
- Induration ________ mm
- Treated for latent TB infection (circle one)
- Prior TB disease (circle one)
- Received BCG vaccine (circle one)
- Yes, date_______ NO
- Yes
- No

If prior positive provider will follow CDC protocol for further testing
- If yes provider will follow CDC protocol for further testing
- If yes provider will follow CDC protocol for further testing
- If yes provider will follow CDC protocol for further testing
- TB blood tests are the preferred method of TB testing for people who have received the BCG vaccine.
- Date PPD #1 administered
- Date PPD #1 read
  - Results
  - Positive
  - Negative
  - ________mm
  - 0mm
- PPD read by print and sign
- Date PPD #2 administered
- Date PPD #2 read
  - Results
  - Positive
  - Negative
  - ________mm
  - 0mm
- PPD read by print and sign

**Chest X-ray (only if performed for positive PPD)**
- Print evaluator name:
- CXR needed (circle one)
  - CXR on file
  - Negative
  - Abnormal
  - Consistent with TB
- Comments (circle one)
  - Referred for follow up medical evaluation.
  - Provided written notification of results.
- Date and evaluator signature
