Adaptive Release – User Progress

The Adaptive Release & Review Status: User Progress function allows an instructor to view availability and review status information associated with a content item or folder for each user.

Follow these steps to view the user progress for an item or folder.

1. Locate the item or folder for which you want to view user progress, and click on the down arrows.

2. Click User Progress.

A table appears, indicating the availability of the item for each student; whether they have reviewed it; and the date it was reviewed. **Note:** The Reviewed and Date Reviewed columns appear only if review status has been enabled for this item.
